

Extraction Cap Saturation Analysis: Justifying the 200-Record Cap
(accuracy and CI width stabilise well before 200 records in all large cases)

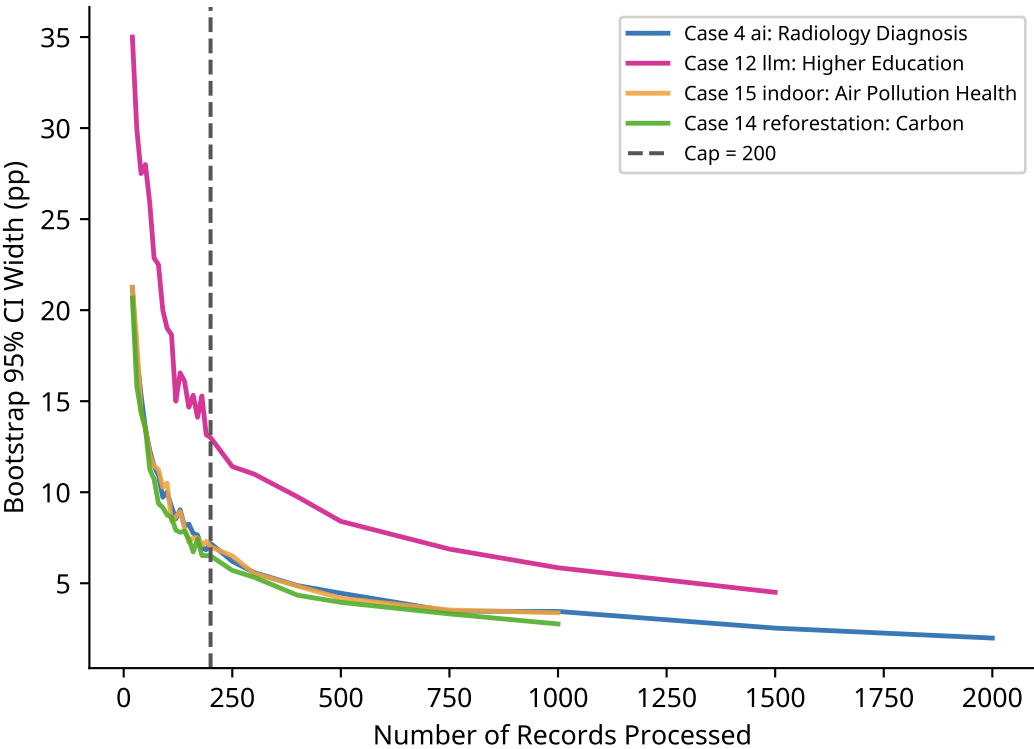

(a) Categorical Accuracy vs. Records Processed

(b) Numeric Accuracy vs. Records Processed

(c) CI Width Saturation
(precision stabilises before 200 records)

(d) Numeric Accuracy at Increasing Sample Sizes
(accuracy at cap=200 closely tracks full-dataset accuracy)
